Pure Planet's Just Barley is a 100% pure, certified organic, low temperature dehydrated juice extracted from young green barley grass.

Why we offer Just Barley:

Barley grass is one of the only resources on Earth that can provide the human body with the nutrients it needs from birth through old age.

Interesting Facts:

Many cultures have associated barley with having feminine characteristics due to the way it gently sways in the breeze when contrasted with wheat which grows in a more phallic or male fashion. Barley juice has been used by many women as phyto-estrogenic support. Barley is resistant to cross breeding and thus is a naturally ancient grain. Many believe that barley creates a milder tasting, and equally nutritious source of green phytochemicals, when compared to wheatgrass. Unlike our Organic Heirloom Wheatgrass blend, this is a 100% pure barley juice extract and contains no alfalfa, making it a more logical choice for those who have been instructed to avoid legumes.

History:

While European and western cultures were adopting wheatgrass juice as a therapeutic aid in naturopathic healing, eastern cultures were embracing the juice from young barley leaves. This is primarily due to the fact that wheat is rarely grown in Japan and China but also because

barley can be cultivated in 5 continents, due to its hardiness and adaptability. The first barley juice powders required the use of carrying agents or excipients and most companies still practice these outdated methods today. Others simply dry whole leaves and grind them into powders. Only Just Barley guarantees a 100% pure, certified organic, kosher and raw pure juice extract in powdered form.

Potential Benefits:

Like all green plants, Just Barley™ contains a wide array of vitamins, minerals, enzymes, chlorophyll, lightweight proteins and the ability to alkalize, and oxygenate. Unlike other green plants, Just Barley has unique qualities only available during the pre-jointing stage of cereal grasses which make them unique. The US Department of Agriculture refers to these unique phytochemicals as the "Grass Juice Factor" and stated that they were vitally important to support both human and animal health.

How it is made:

The ancient organic seeds are cultivated in high altitude, chemical free soil and grown until the pre-jointing stage, which is when scientists show it is highest in vital phytochemicals. The tender leaves are washed, juiced and dried within minutes at less than 88° F, producing a 100% pure juice extract.
